CM = Codling Moth, OFM = Oriental Fruit Moth, PTB = Peach Twig Borer, CRS = California Red Scale, SJS = San Jose Scale, NOW = Navel Orangeworm, OLR = Omnivorous Leafroller

NOTE: The foregoing is supplied as a general information guideline only. This information is specific to the site location from which it was obtained. For optimum pest management decision making, each orchard site should be individually monitored with traps and environmental monitoring equipment.

CIDETRAK® DA MEC™ enhances codling moth larval control when mixed in the spray tank with insecticide in conventional and organic walnut orchards.

Dr. Douglas Light, USDA-ARS, Emeritus, "CIDETRAK DA MEC provides a higher level of insecticide efficacy in killing hatched larval worms and protecting the walnut set that the grower currently sees, and counts on, by targeting the Codling Moth 1B, 2nd and the current 3rd flight, as it can still be used in pre-harvest sprays of walnuts. This also adds the benefit of decreasing damaged-nuts for NOW to later infest."
